

COLLECTING

SWEEPER

COLLECTING SWEEPER

The Sweeper:

The collecting sweeper enables a quick and impeccable sheds cleaning.

When the side hydraulic sweeper is attached the work is even quicker and just one operator is required.

The Functioning:

The collecting sweeper is connected to the tractor PTO having 540 RPM and to the tractor lifting.

The cardan joint transfer the motion to the cleaning roller (brush) located inside the machine frame.

This rotation in combination with the tractor feeding determines the cleaning and the and the dust collecting.

To unload the dust hopper lift the machine and pull the rope and hopper turning over will be activated.

This is a labour-saving machine which enables operator to do the work of several manual pickers.

Materials Used:

To ensure long life to this machine just high-strength painted iron is used for the manufacturing.

Main Characteristics:

- Time saving (20 minutes for 1200 Mt sheds)
- Optimal cleaning also in the most difficult point
- Labour saving (just 1 worker)
- Less stress physical stress for the operator
