**THE WOOD-SHAVING
SPREADER**

THE WOOD-SHAVING SPREADER

The Wood-Shaving Spreader

The Wood-Shaving Spreader allows a quick and impeccable working thanks to the levelling system set by the operator to get the wood-shaving, saw dust or the rice meal even.

Operation

The Wood-shaving spreader is connected to the tractor PTO 540 RPM and to the lift and third point.

The cardan shaft transfers motion to the "comb" located inside the machine frame guaranteeing an impeccable and steady spreading.

Materials used in Construction

To ensure long life to this machine only high-strength hot galvanized structural steelwork has been used.

Main Characteristics

- Possibility of selecting the quantity of wood-shaving needed for spreading according to the customer's needs.
- Even spread of wood-shavings over the entire shed surface.
- Saving on the amount of material used.
- Saves time (10/20 minutes per shed).
- Saves labour (just 1 worker required).
- Excellent reliability: fine wood shavings on the bottom level whilst coarse wood shavings remain on the surface for the highest yield inside the shed.
